

Final Results for Three (3) and Five (5) Year Limited-Term Proposals

Under the oversight of the Independent Monitor, ESI has concluded its review and evaluation of the 3-year and 5-year proposals submitted in response to the Summer 2008 RFP. As a result, ESI has received Entergy Operating Committee approval to move forward with one (1) 100 MW proposal for a Short-Notice Peaking MUCCO – Product Package F. ESI has notified this Bidder that its proposal has been selected for award. All remaining Bidders who submitted 3-year and 5-year proposals have been notified that their proposals have been rejected from further consideration.

ESI is in the process of negotiating the definitive agreements associated with the proposals selected from the limited-term portion of the RFP. Once that process is complete ESI will post the final results to this website.

ESI is also in the process of determining the need to move forward with the displacement analysis under the RFP. ESI has extended to one Bidder the option to keep its proposal open pending this decision. ESI will make a determination regarding the displacement analysis by April 6, 2009 and update the Bidder and this website accordingly.
